Each team member is to design a poster showing calculations and a visual representation of at least two bodies in our solar system.

Example:

If the earth were the size of a bowling ball, then the sun would be _____ far away.

If the sun was the size of a house, then the earth would be the size of a_____.

Within each group, some type of theme or common comparison should be used. Thus, the poster for the group will be displayed together.

Each poster should also contain information about AU's, Light years, and the scaled down speed of light for their particular model.
