

Senior Project (WS-1)

Name: _____ #: _____

Date: _____ Block: _____

Examine each of the following experiments and identify the different characteristics

1. Pavlov's Dog (Classic Conditioning)-A dog is placed in a room. Each time just before the dog is feed, a bell rings. Eventually, the bell is ringed without the dog being feed. The dog now salivates when hearing a bell ring.

4. Five thousand people between the ages of 20-30 volunteer for an experiment. Each is given a full heart and lung check-ups. They are then separated into two distinct groups according to percent body fat. For the next three years the group with a higher body fat is placed on a strict diet, and required to exercise three to four days a week. Finally the two groups are brought back in for a full heart and lung check up and percent body fat test.
